

Net Zero Commitment Statement

At Deadline Despatch Ltd, we recognize that the logistics and transport sector plays a critical role in global carbon emissions. We are fully committed to achieving **net zero greenhouse gas (GHG) emissions across our entire value chain by 2050**.

To ensure we stay on track toward our long-term vision, we commit to a **45% absolute reduction in Scope 1, 2, and 3 emissions by 2035**, using 2025 as our base year.

Our Strategic Roadmap

To honour this commitment, we are transforming our delivery network through four strategic pillars:

- **Fleet Electrification:** Transitioning 100% of delivery vehicles to electric or zero-emission alternatives by 2035.
- **Route Optimisation:** Deploying advanced AI routing software to minimize mileage, idle times, and fuel consumption per delivery.
- **Renewable Infrastructure:** Powering all offices using 100% renewable electricity by 2028.
- **Value Chain Engagement:** Collaborating with our third-party owner-drivers and freight sub-contractors to accelerate their shift to low-carbon fuels and electric transport.

Accountability and Offsetting Policy

We believe in absolute transparency. We will measure and publicly report our carbon footprint annually through recognized frameworks.

In alignment with strict net zero principles, Deadline Despatch Ltd will prioritize deep, structural emission reductions. We will only utilize high-integrity, certified permanent carbon removal technologies to neutralize any unavoidable, residual emissions remaining after 2045. We will not rely on temporary avoidance offsets to claim net zero status.
